

SCOUTING DASHBOARD

User Manual

Mexico National Team · Technical Staff

Historical Data: Aug 2022 – Present · Source: API-Football · AWS Data Lake / Gold Layer

1. Overview

The Scouting Dashboard is an interactive HTML tool designed for Mexico's technical staff to analyze international match data from rival nations. It is self-contained in a single .html file that runs in any modern browser — no installation or internet connection required.

The dashboard covers 13 national teams with historical match data from August 2022 to present, processed through the AWS Data Lake pipeline using API-Football as the data source.

2. Opening the Dashboard

Since the dashboard is a standalone HTML file, no server or installation is needed:

- Locate the file `mexico_scouting_dashboard.html` on your computer.
- Double-click the file — it will open automatically in your default web browser.
- Recommended browsers: Google Chrome, Microsoft Edge, or Mozilla Firefox.
- No internet connection is required after the file is open.

Note: If the file does not open correctly, right-click it and choose Open With → your browser.

3. Navigation

The dashboard has two main modes, accessible via the toggle buttons at the top of the page:

OVERVIEW

Displays detailed statistics for a single selected team. Use this mode to do a deep dive on any rival before a match or training session.

- Select a team using the team buttons below the mode toggle.
- All panels update automatically when you switch teams.
- Mexico is included as a reference point for self-assessment.

HEAD-TO-HEAD

Compares Mexico directly against a selected rival, side by side, metric by metric. Mexico is always fixed on the left column.

- Select an opponent using the buttons on the right (Mexico cannot be selected as the rival).
- The opponent name updates in the header label as soon as you pick a team.
- The comparison loads automatically — no extra click required.

4. Overview Mode — Panels

4.1 KPI Cards

Five summary cards appear at the top of the Overview, showing the most important numbers at a glance:

Metric	Description
Matches Played	Total number of international matches in the dataset.
Wins	Number of matches won. Win rate shown as subtitle.
Goals Scored	Total goals scored. Average per match shown as subtitle.
Goals Conceded	Total goals conceded. Average per match shown as subtitle.
Goal Difference	Net difference between goals scored and goals conceded.

4.2 Match Results

A circular ring chart shows the win rate visually. The ring animates on load. Below the ring, three horizontal bars break down the results:

- Wins — shown in the team's primary color.
- Draws — shown in grey.
- Losses — shown in red.

4.3 Goal Stats

Four figures displayed in a 2×2 grid:

- Goals Scored — total, in the team's accent color.
- Goals Conceded — total, in red.
- Goal Difference — net value (positive or negative).
- Goals Ratio — goals scored divided by goals conceded. Values above 1.0 indicate the team scores more than it concedes.

4.4 Per-Match Averages

Horizontal bar chart comparing three averages for the selected team against the maximum value across all 13 teams. This provides immediate context for how the team ranks:

- Goals Scored per Match — offensive output.
- Goals Conceded per Match — defensive exposure.
- Win Rate — overall performance.

The bar fills proportionally: a full bar means this team holds the highest value among all teams in the dataset.

4.5 All Teams Comparison Table

A reference table showing all 13 teams side by side. The currently selected team's row is highlighted. Color coding is applied per column:

- Green value = best in that metric among all teams.
- Red value = worst in that metric among all teams.

5. Head-to-Head Mode — Panels

5.1 Team Selector

Mexico is permanently fixed as Team A (left side). Use the opponent buttons to select any of the other 12 teams as Team B. The header label updates to show the matchup name.

5.2 Versus Header

Displays both teams with their flags, names, and a count of how many metrics each team wins in the comparison (labeled as advantages). This gives an instant summary before reviewing the detail.

5.3 Metric Duel

The core of the Head-to-Head view. Each metric is displayed as a row with *Mexico* on the left and the opponent on the right. For each row:

- The value is shown in the team's color if that team wins the metric, or white if it loses.
- A proportional bar below each value shows relative magnitude.
- The winning side displays a green ▲ Advantage tag.
- A colored dot in the center indicates which team wins that metric.

Metrics compared in the duel:

Metric	What it measures / Who wins
Matches Played	Higher = more experience. Higher value wins.
Wins	Number of victories. Higher value wins.
Win Rate	Percentage of matches won. Higher value wins.
Goals Scored	Offensive volume. Higher value wins.
Goals Conceded	Defensive exposure. Lower value wins.
Goals Scored / Match	Offensive efficiency. Higher value wins.
Goals Conceded / Match	Defensive efficiency. Lower value wins.

5.4 Summary Cards

At the bottom of the Head-to-Head view, two cards show the full data profile for each team side by side, including all raw figures from the Gold Layer.

6. Teams in the Dataset

The following 13 national teams are currently available in the dashboard. Data covers international matches from August 2022 to present.

Code	Team	Matches	Win Rate
MEX	Mexico	43	48.84%
ENG	England	45	64.44%
NOR	Norway	33	57.58%
CRO	Croatia	46	56.52%
SWE	Sweden	38	50.00%
GER	Germany	47	48.94%
CZE	Czech Republic	41	46.34%
QAT	Qatar	39	41.03%
SUI	Switzerland	41	41.46%
KOR	South Korea	22	40.91%
RSA	South Africa	47	40.43%
CAN	Canada	38	39.47%
BIH	Bosnia	34	26.47%

7. Data

All data shown in the dashboard is sourced from API-Football and processed through the AWS Data Lake pipeline before being loaded into this tool.

The Gold Layer metrics loaded into this dashboard are:

- Win percentage (porcentaje_victorias)
- Goals scored and conceded (goles_a_favor / goles_en_contra)
- Goals per match averages (goles_favor_por_partido / goles_contra_por_partido)
- Match counts by result (victorias / empates / derrotas)

8. Tips for the Technical Staff

- Use Overview mode before a scouting session to get a full picture of a rival's profile.
- Switch to Head-to-Head to identify specific areas where Mexico has an advantage or is at risk.
- The Advantages counter in the versus header gives a fast summary — useful for quick briefings.
- Goals Conceded per Match is the most useful defensive metric when preparing set-piece or pressing strategies.
- The Goals Ratio (scored ÷ conceded) above 1.0 indicates a team consistently outscores what it gives up.
- Teams with high Draws counts (e.g. South Africa: 23) often play a conservative, counter-based style.

9. Notes & Known Limitations

- Data does not include lineup, possession, shots or xG — only match-level results and goals.
- Match counts differ between teams due to fixture calendars and competition participation.
- This file is a static snapshot. It must be regenerated from the Gold Layer to reflect new matches.

For data updates or pipeline issues, contact the data engineering team responsible for the AWS Glue jobs.
